

Kristal stone factories group:

- More than half a century of experience in the field of stone production and processing
- 30 years of specialized activity in the field of processing all kinds of granite stones
- More than 100 stone experts
- The fields of mining, processing and selling directly and indirectly
- Having specialized production halls with an area of 6000 sq.m.
- One of the largest specialized producers of granite types in the Middle East
- International certificates of IMS integrated management system from England and Ireland
- ISO 9001, ISO 14001 and OHSAS 18001 international certificates
- The most up-to-date and specialized cutting and processing devices available in the world
- Diffrents tools
- Stone polishing (various types)
- Cutting all kinds of granite stones
- Different thicknesses from 10 mm up (with accuracy and minimum tolerance)
- Production of all high-quality volume sections
- The experience of exporting our products to more than 20 countries in the world (Russia, Turkey, Germany Bulgaria, Turkmenistan, Iraq, Qatar, Armenia, Belarus Romania, Azerbaijan, etc.)
- Ability to provide the final product with the best quality
- The most diverse and reliable packaging type
- Transport and delivery at destination

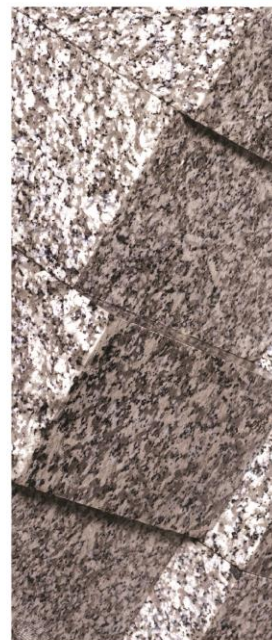

«« About us

Why Granite?

Granite is one of the most abundant igneous rocks and one of the strongest building stones which is formed from the gradual cooling of molten materials. The main characteristics of granite stone:

- High impact resistance
- High scratch resistance
- High resistance to abrasion
- High resistance to thermal stresses
- Little water absorption
- Very high Subductability
- Resistant to weight
- Processing in different dimensions and shapes
- Suitable for high traffic and damaged places

Based on the above characteristics, granite stone is one of the best choices to use as floo, steps kitchen cabinet and countertop stone. Granite stone is also used as interior and exterior facade stone. especially due to the low water absorption of this stone and thus preventing it from freezing and cracking at low temperatures, granites are also very suitable for cold regions.

Gray And White Granite:

Gray and white granites are among the most diverse granite stones, which are distinguished and categorized by black and gray fine to coarse grains.

Advantages:

- Very high resistance
- Very cost effective
- Uniformity in design and production
- High quality and quantity processing
- Manufacture with precision in most dimensions and large dimensions
- Mass consumption and Mass production

Beige and chocolate granite:

Advantages:

- Great variety
- Cost-effective
- Stunning uniformity
- High resistance to erosion and weather changes
- Low water absorption
- Temperature resistant
- The ability to process in different dimensions (for various and designable uses)

Green Granite:

Undoubtedly, the most special and unique green color of granite is found in Iran.

Advantages of Iran's green granite:

- Having golden lines and streaks
- High variety and unique
- Very beautiful and amazing decoration
- Use in luxury centers such as hotel lobbies, halls and museums
- Creating a sense of freshness, hope, peace and security
- Heat resistant

Red Granite:

Iranian red granite is one of the best and most special types of red granite in the world; its color spectrum is very wide and varies from dark to light.

Advantages of Iran's red granite stone:

- Having a space with a high energy
- Stunning and attractive
- High resistance
- Low water absorption
- Antibacterial
- Heat resistant
